The Hazel Academic Building will sit just south of the old barn on campus.

The family of construction magnate William Hazel announced a \$1 million donation for a new Lord Fairfax Community College academic building Wednesday.

Standing in an outdoor pavilion, flanked by current and former state legislators, Hazel's son, William Hazel Jr., announced the donation in a flourish marking the 25th

anniversary of the college's presence in Fauquier County.

The newly-christened Hazel Academic Building, once complete, will take up 40,000 square feet and will sit just south of the old barn on campus. Chris Boies, Lord Fairfax's vice president of financial and administrative services, said the building will cost about \$20 million to build, stock and furnish.

The building will contain classrooms and equipment for science, technology, engineering, math and nursing disciplines that have increasingly formed the core of the northern Virginia economy, Boies said. Lord Fairfax's proposal for the building is now in its second cycle in Virginia's six-year higher education capital outlay plan, Boies said. Only about 20 or 30 of the hundreds of projects in that plan get support from the state assembly every year, Boies said. But the Hazel family's \$1 million contribution increases the likelihood of the college's plan coming to fruition, he said.

"This gift will help us move forward," Boies said. "Any time you can show private interest and investment in a project, it's a good thing."

The gift comes from the fortune William Hazel amassed through his career in construction. Hazel, who died last September, started one of the state's largest construction firms with a single bulldozer, which he drove.

He never went to college, said his son, who is a doctor and Virginia's secretary of health and human resources.

"I think he always wished he had. Maybe he thought he would have been successful in life if maybe he had gone to college," Hazel Jr. said to the crowd's laughter.

Hazel's brother, John "Til" Hazel, said the construction giant's interest in education started when he learned some of his employees couldn't read to understand the manuals for excavation equipment that had grown more complex as the years passed. In the years since, Hazel and his family have donated land and money to several schools in the region, including Lord Fairfax Community College and Highland School in Warrenton.

Russell Potts Jr., the former state senator who represented Senate District 27, called Hazel "a champion of the little guy." Potts said the Hazel family's contribution puts the new academic building's construction within reach.

"It will happen, and it'll happen sooner than anybody thinks," Potts said.

Hazels contribute \$1 million for LFCC science building

Dr. William Hazel Jr. announces the family's \$1-million donation.

Although he didn't go to college, Broad Run resident and businessman William A. Hazel Sr. (1935-2012) became a major force in education.

He realized throughout his life that education is the foundation of prosperity Obviously, this institution needs a major building.

Fauquier's community college will get a \$1-million donation from the late William A. Hazel Sr.'s family toward the construction of a science and technology building.

A Broad Run resident, [Mr. Hazel](#) died at age 77 in September 2012.

William Hazel Jr. announced the gift Wednesday morning at a celebration to mark the 25th anniversary of the local Lord Fairfax Community College campus near Warrenton.

LFCC officials last year began planning [the new building](#), estimated to cost \$19.5 million.

"It is desperately needed," college President Cheryl Thompson-Stacy told the audience of about 200 Wednesday.

A branch of the main college in Middletown, the Fauquier campus has grown to almost 2,000 students.

Community leaders, college supporters and politicians gathered in a large tent beside the converted barn that Janet and Bob Sowder donated to start the campus in 1988.

LFCC dedicated a new, \$7.2-million building 11 years later.

Because of rapid growth, the campus has added mobile classrooms. LFCC-Fauquier lacks a place for large meetings and needs more instructional space, especially for medical, science and technology courses, Campus Administrator Judy Batson said.

“Education has to meet people where they are,” said Dr. Hazel, Virginia’s secretary of health and human services. “We know in this community, we have foster children who take classes here . . . Others, high academic achievers, come here to fill in a gap” between high school offerings and college.

Dr. Hazel mentioned the rapid escalation in the cost of college and noted that community colleges deliver more than half the higher education in Virginia.

“My dad didn’t go to college, and I know he wished he did,” Dr. Hazel added.

As he built an 1,800-employee company, Virginia’s largest excavation and site development contractor, the late Mr. Hazel came to recognize his workforce’s needs for adult literacy instruction and continuing education.

“My brother started out fighting education,” John “Til” Hazel Sr. told the audience. “He barely finished high school.”

But, through his philanthropy and advocacy, the late Mr. Hazel became a force in education, supporting LFCC, George Mason University, Duke University, VMI, Highland School, Woodberry Forest School and Flint Hill School, among others.

“He realized throughout his life that education is the foundation of prosperity,” Til Hazel added. “Obviously, this institution needs a major building.”

Wednesday’s announcement makes the building’s construction more likely.

He doesn’t know where the building ranks on the Virginia Community College System’s list of capital priorities, Chancellor Glenn DuBois admitted as he stepped down from the stage Wednesday.

“When somebody drops a \$1-million deposit on you, it moves up the list,” Dr. DuBois said.

Typically, combinations of state and local funding pay for new community college buildings. Dr. Batson said the LFCC Foundation and the community must build on the momentum of the Hazel family’s gift.

“We’ve got appropriations for it, and we’ll start working on it during the session” that starts in January, said Del. Scott Lingamfelter (R-31st), who represents part of Fauquier in the Virginia House of Delegates. “I’m gonna be advocating for this.”

She and Dr. Hazel started talking about the family's support for the new building last year, said Anne Hall, a Warrenton Realtor, longtime LFCC supporter and close friend of the late Mr. Hazel and his wife Eleanor.

But, Mr. Hazel's health declined rapidly, before the family developed a plan.

His wife, children and their spouses lined the front row Wednesday, greeting friends and accepting thanks from dozens of guests.

"Bill Hazel was a champion of the little guy," former state Sen. Russ Potts (R-27th/Winchester) said. "He believed the impossible was possible . . . through hard work."

Mr. Potts asked the audience to imagine the ribbon cutting for the new building.

"It will happen and it will happen sooner than anybody thinks," he said.

Sitting quietly with his wife at lunch after the ceremony, Mr. Sowder agreed.

"I think it will happen in five years," he said of a groundbreaking. "When you get a family like the Hazels behind something, people get involved."

Dr. Thompson-Stacy, LFCC's president said of Mr. Hazel: "His legacy will live on at Lord Fairfax."
